## Editorial Policy

**Biochemical Education** publishes editorials, articles and reviews to assist the teaching of biochemistry to science and medical students in universities, colleges and similar establishments throughout the world.

The Editor welcomes articles on teaching technique and practice and on methods of assessment. From time to time short background reviews are commissioned on key areas of biochemical knowledge with the aim of keeping teachers abreast of developments. Articles giving details of simple, tried and tested class practical experiments are especially encouraged and the Editorial Office supervises a scheme for the exchange of practical protocols.

Each issue contains reviews of books, particularly texts suitable for adoption for undergraduate and medical courses, of teaching films, and of aids such as tape/slide sets and overhead projector transparencies. Reports of meetings on educational topics are published and there is a **'Letters to the Editor'** section.

In all these activities the problems of teaching biochemistry in institutions in the developing countries are given special consideration.
